

Portal Solutions

AgreeYa Solutions enables customers to unlock business potential and enhance productivity by providing access to information and improving collaboration through a single web-based portal. Our Portal Solutions consolidate services or applications into a single point of access and build a community by providing communication tools. We bring Web 2.0 technologies to the enterprise, giving end users control over information, collaboration, and processes along with the ability to deliver new applications in a portal.

Our customers experience greater productivity across their business because key business processes are automated, and employees are provided accurate information quicker. Managing projects, information, and knowledge through a single platform reduces communication costs. Customers also benefit from a dashboard of key performance indicators which enables more proactive decision-making.

AgreeYa specializes in the following portal technology products:

- **Portal Server:** Microsoft SharePoint Server, IBM WebSphere Portal Server, BEA Weblogic Portal Server, Metadot, LifeRay
- **Content Management Server:** Microsoft Content Management Server, IBM WCCM, Interwoven Teamsite, OpenDeploy
- **Security and Identity Management:** Microsoft Active Directory, Tivoli Directory Server, Oracle Core ID, LDAP
- **Search:** Verity K2, Google
- **Web Analytics:** WebTrends, Google Analytics, Urchin
- **Electronic Forms:** Adobe Live Cycle Forms, IBM Lotus Forms, Microsoft InfoPath and Microsoft Office System
- **Team Collaboration:** Confluence, Lotus Quickr

SUCCESS STORIES

Group Portal Development for large UAE Conglomerate

Due to growing organizational needs, the Customer required larger collaborative environments, improved communication media, knowledge management, intelligent management reporting, and information security. AgreeYa was engaged by the Customer to develop and implement an employee intranet and internet portal for the entire group comprised of 13 companies.

AgreeYa proposed a solution based on MOSS 2007, to address the need for a scalable, dynamic portal with robust security and to be developed and customized in a short timeframe. The project was completed in two phases. Phase 1 included development of the Customer's internet portal site; Phase 2 included development of intranet sites, automation of processes, publication of E-business services, and integration with SAP. The key benefits realized by the Customer included: increased employee productivity; effective content management; shared best practices; enhanced end user experience; and a better connection between people, processes, and information.

Intranet Portal for Major Automotive Company in India

The Customer engaged AgreeYa to revamp its existing Employee Intranet Portal, to cater to growing organizational needs. The new portal required improved collaborative environments, content and knowledge management, communication media, and information security. The new portal would provide access and information to 3,200+ employees and feature rich functionalities.

AgreeYa proposed a solution based on MOSS 2007. The entire project is to be completed in two phases. Phase 1 involves enterprise-level migration and restructuring of the current intranet portal from SharePoint 2000 to MOSS 2007. Phase 2 involves ad-hoc enhancements as per additional Customer requirements. This is an ongoing project and both on-site and off-site teams are involved in configuring and customizing the portal to deliver rich content and an improved user experience. This includes customizing web parts, forms, development of reports, and enriching the branded look and feel of the portal.
